

LIBERTY

LIBERTY IS INDEPENDENCE

Finally, one wheelchair that offers true portability, enables independent propulsion and provides the benefits of tilt-in-space!

Liberty is designed for independent mobility, especially foot propulsion. The front seat height remains the same regardless of the tilt angle. Simply choose the tilt angle that provides the best pelvic stability without compromising mobility.

Everyone needs relief from sitting in a static position. Whether your primary concern is pressure relief, facilitating proper posture or just providing a break from gravity, Liberty makes it painless. Featuring an easy to adjust gas spring design, adjusting the system for effortless repositioning is simple.

PORTABILITY

Liberty Folding is the only adult tilt-in-space that can fold into a portable package ideal for transportation. Want an even smaller package? Choose the optional folding backrest. With a transport weight under 26 pounds, it's the lightest adult tilt-in-space available. Liberty gives you the independence to get out and go!

OPTION TOUR

Liberty is one of the most versatile solutions on the market providing the options needed to meet the end users changing needs. In most cases, the modular design allows for easy change of dimensional characteristics making it the ideal choice for short discharge notification in stroke rehabilitation.
