

The Fusion APT system provides therapeutic alternating pressure to aid in pressure redistribution. The pump uses a 2-in-1 alternating cycle every 10 minutes and is quiet enough to help with restorative sleep. The Fusion APT is an ideal mattress system for the prevention and treatment of stage I-II pressure injuries.

With 3.5" wide transfer edges, the Fusion APT enables safer transfers on and off the surface and reduces the risks of falls.

The pump controls offer eight adjustable levels of comfort depending on the user's therapy requirements. It also includes a low-pressure alarm which sounds when the air pressure of the mattress is lower than the default setup.

In the event of a power outage the Fusion APT remains inflated for up to 24 hours.

The transfer edges as well as base unit of this mattress system are all coated in a fluid resistant nylon fabric. This allows for easy clean up and eliminates risk of contamination to any foam components.

Product Specifications

CONSTRUCTION

18 28"x 5" Denier Covered Polyurethane air cells set inside a foam crib.

The foam crib creates the 3.5" transfer borders on each side of the air cells, as well as 1" foam border on the top and bottom of the cells.

The entire foam crib is covered in a disinfect able nylon fabric.

COVERS

Recovery 5 quilted top cover; breathable, fluid proof, anti-microbial.

HEIGHT
6"

PRODUCT CODE
FUSAPT80-B

STANDARD SIZES
36" X 80"

WEIGHT CAPACITY
350lbs

CUSTOM SIZES
