

SGA-440

Introducing the Prism Medical SGA-440 Sit-to-Stand Lift. A smooth and versatile sit-to-stand lift, intended for patients who can participate actively in the transfer. Once in a standing position, transfer to a wheelchair or commode is done easily and smoothly. The patient also gets valuable standing training with the transfer. The SGA-440 allows for a wide range of adjustments to the leg supports and the lifting bar to accommodate the support and comfort needs of the patient. These adjustments enable the caregiver to adapt the transfer to pain sensitive patients or patients paralyzed on one side, with no need for additional equipment or separate lifts.

PRODUCT HIGHLIGHTS

- Weight capacity is 440 lb.
- Lightweight aluminum design offers stability and durability
- Integrated charger or optional wall mount charger is available
- Control box comes standard with diagnostic capability and tracking of lift usage
- Electronics include emergency stop and emergency lowering functions
- An additional leg support strap is also included for added security

Dual wheel 3" x 3" casters offer the maximum control and smooth ride. Rear casters come with locking feature.

The mast and base connection is easily assembled without tools. The locking handles easily secure the components for a solid connection.

The adjustable lifting bar has multiple depth settings and is ideal for working with different patients, especially when positioning and support are critical.

Leg support can be adjusted in width and height, plus the leg support and the foot rest can easily be removed when needed.

The base width adjustment is easily adjusted by a foot pedal release mechanism at the rear of the lift.
